A recombinant Adenylyl cyclase is described which lacks membrane bound domains. Separation and purification of the recombinant enzyme is much easier compared with wild type enzymes and the recombinant enzyme is more stable than the wild type enzyme which allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase comprises a chimera of adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase extivity. Inhibitors of the enzyme are useful for treating cholera, pituttary tumors, heart failure, ischaemla, endocrine disorders and cell necrosis. Stimulators of adenylyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel soluble mammalian polypeptide composition comprising adenylyl cyclase activity for screening stimulators and inhibitors of adenylyl cyclase, is activated by Gsalpha

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABE93020 to ABE93012, encoding the protein sequences in ABE57020 to ABE97031) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. ABE19913 and ABE9914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ŏ
                                                            The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella communiae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery comported and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery compounds nucleic acids sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formation in the content directly from MIPO at the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    52
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                53 -----ProSerProThrProAlaGlyProProArgCysProTrpGlnAspAspAlaPhe 70

This sequence has the ability in complementation experiments to restore macrolide blosynthetic gene transcription in mutants having defective srmR genes due to insertional inactivation of that region of the S. ambofaciens genome. The srmR gene product activates macrolide blosynthetic gene transcription and may be used to increase the efficiency of macrolide blosynthesis. The translation product of this gene is useful for the generation of antibodies (polyclonal or monoclonal) which are useful in the detection of other macrolide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1584 GCGTGGGTGAGCGGG-----GCGCCCCGATCAGGTCGTCGAAGAACTCCTGGTGGTTT 1531

Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to the polynucleotide which comprises a 1-east 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs applies allow obtaining of the full-length cDNAs represent human cDNA sequences; AMB92446 to AAH13628 and AAH13633 to AAH13632 to AAH13632 to AAH13632 to Expresent human amino acid sequences; and AAH13632 to AAH13632 to Expressent control of the complement of the exemplification of the complement of t

Prepn. of recombinant gB and gD is described in WO88504587. The amino acid sequence and DNA sequence for gB 1 presented in AAP80914 and AAAN80907 differ from that originally presented in Table 1 of International Publication No. WO 85/04587. The DNA sequence in Table 1 contains an error in that an additional nucleotide (G) is listed at position 607 which resulted in a shift in reading frame relative to AAN80907 from which this nucleotide has been deleted.

The methods and products can be used to identify compounds which modulate (stimulate or inhibit) apoptosis in cells. They can be used to immortalise cells for the study of these cells or for growing cells in large numbers for the productions of proteins. They can also be

The herpes simplex virus (HSV) alpha-4 gene encodes infected cell protein number 4 (ICP4). Both the alpha-4 gene and ICP4 can be used to block cell apoptosis. Similarly the administration of an agent that inhibits ICP4 or the alpha-4 gene can induce apoptosis in HSV infected cells. This can be used for the immortalisation of cells, production of proteins, gene therapy, or inhibition of cell death induced in vivo. They can also be used for production of therapeutics comprising inhibitors of HSV ICP4 function, useful for treating HSV function.
                                                                                                                                                                                                                                                                                                                                                                                      17 ThralaTrpGlyGluArgAsnGlyGlnLysArgSer------ArgArg-ArgGl 32

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5578481
GENERAL INFORMATION:
APPLICANT: ISHIKawa, Yoshihiro
TITLE OF INVENTION: Cloning and Characterization of
TITLE OF INVENTION: Cardiac Adenylyl Cyclase
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: American Cyanamid Company
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Conservative:

Patent No. US20020168711A1
GENERAL INFORMATION:
APPLICANT: Rosen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PT232
CURRENT APPLICATION NUMBER: US/09/764,868
CURRENT FILING DATE: 2001-01-17
Prior application data removed - refer to PALM or file wrapper
TITLE OF INVENTION: HEMATOLOGICAL MALIGNANCIES
CURRENT APPLICATION NUMBER: US,09/796,692
CURRENT FILING DATE: 2001-03-01
PRIOR PEDICATION NUMBER: 60/196,126
PRIOR PELICATION NUMBER: 60/190,479
PRIOR FILING DATE: 2000-03-17
PRIOR PELICATION NUMBER: 60/200,545
PRIOR PELICATION NUMBER: 60/200,545

/dev_stage="One month old plants"
/dev_stage="Cone month old plants"
/dev_stage="Cone month old plants"
/dev_stage="Cone month old plants"
/dev_stage="Cone month old plants were
subjected to vernalization treatment by placing them in
the cold room at 6 c, under 15hr light/9hr dark condition.
The cold room as prepared from apex tissue extracted from
plants with no cold treatment; and from plants with 2-week
/d week and 6 week cold treatment separately. Equal
amount of total RNA was pooled from all four samples, a
cDNA library was made using pooled polyA RNA and cDNA
clones were in vivo excised at the University of
California, Davis (V. Echenique, B. Stamova, J. Dubcovsky
). Plasmid DNA preparations and DNA sequencing were
performed in the Ob Anderson lab (all other authors)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Unpublished (2002)

Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGGCCATTATGGCC; and 3' adaptor
sequence: 5'-ATTCTAGAGGCCGAGGCGGCCATG-dT(30)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.65 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA)."
